

ATTENTION: SOLAR CONTRACTORS

Effective June 28, 2021, panel upgrades when done in conjunction with any solar permits will require a separate permit. You can no longer include the panel upgrade as part of the solar permit.

If a panel replacement is discovered during an inspection of a solar system, the inspection process will cease until a permit is issued for the upgrade. The permit/inspections, for the new service must be completed before the solar system will be passed. The inspection for the panel upgrade can be done at the same time as the heat meter and final electrical inspections on the solar permit.
