

# Calamagrostis x acutiflora

## Karl Foerster Reed Grass

This beautiful reed grass is a landscaping staple due to its uniform shape and durability. The grass does well in a wide variety of environments from very moist to dry. Often used in naturalized areas, it's ultimate size is directly related to the amount of moisture receives. Karl Foerster won Perennial Plant of the Year in 2001, which is rare for a grass. Plant in full sun, low to moderate water, tolerates most soils.  
Height 3-4' Spread 12-16''

USDA Zones: 3-9
