

**Cheyenne Mockorange**  
**Philadelphus lewisii 'Cheyenne'**

Height: 6'-9'  
Width: 5'-8'  
(At Maturity)  
Growth Rate: Fast  
USDA Zone: 4-8  
Bloom: White  
Time: June/July  
Sun: Full/partial  
Water: Very low

**This is a North American native with the parent plants located at the USDA Field Station in Cheyenne, WY. They have thrived there over many decades with little to no care. The single white blooms which cover this shrub emit a sweet orange like fragrance and are produced on the previous years growth.**

**This tough shrub, also known as wild mockorange, is well suited for growth in alkaline soils and once established is drought tolerant. Prune old stems from the plant right after blooming. Plant it in area where you will be able to enjoy the fragrance while it is blooming, but keep it away from reflective heat.**
