

Golden Rain Tree

Koelreuteria paniculata

Height: 20'-30'
Width: 20'-30'
(At Maturity)
Growth/Yr: 3-24"
USDA Zone: 5-8
Bloom: Yellow
Time: June/July
Sun: Full Sun
Water: Low

This is a good tree for a low water use garden and is adaptable to our alkaline soils. Native to eastern Asia, this tree produces yellow flowers in late spring producing an interesting fruit which may remain on the tree through the rest of the year. The leaves turn a golden yellow in the fall.

This tree will benefit from structural pruning because it can be weak wooded, and the seeds it produces are viable. When pruning remove crossing branches or those that have a weak branch attachment. Winter watering is advisable. 5 gallons of water per inch in diameter, per month is recommended.
