

Canada Blue Fescue™

This turfgrass is typically used in passive landscape areas. This turfgrass is a blend of Canadian bluegrass and other fescues. It requires very little water after it has become established and has a very unique blue-green color. It has a tendency to go dormant during the heat of mid summer, but quickly recovers. Other characteristics of this grass include:

- Like to grows to 6” tall, mowing frequency is reduced
- Reduced fertilizer needs
- Very fine leaf blade, soft to the touch
- Has a tendency to “lay down” with increased foot traffic. It does recover quickly
- Very adaptable to our climate.
